## Abstracts

According to our (Global Info Research) latest study, the global Dibutyl Ether market size was valued at US\$ 359 million in 2025 and is forecast to a readjusted size of US\$ 499 million by 2032 with a CAGR of 4.8% during review period.

Dibutyl Ether is an organic ether compound with the chemical formula  $C_8H_{18}O$ , typically appearing as a colorless, flammable liquid with relatively low water solubility and good solvent properties. It is mainly used as an industrial solvent, extraction agent, reaction medium, fuel additive component, and specialty chemical intermediate in pharmaceuticals, agrochemicals, coatings, and organic synthesis. The supply chain of Dibutyl Ether starts upstream with petrochemical feedstocks such as n-butanol, sulfuric acid catalysts, and refinery-derived hydrocarbons supplied by chemical producers and petrochemical companies. In the midstream stage, chemical manufacturers produce Dibutyl Ether mainly through the dehydration or etherification of n-butanol under acidic catalytic conditions, followed by purification, distillation, and packaging processes to achieve industrial-grade or high-purity specifications. Distribution is handled through chemical distributors, solvent suppliers, and bulk storage logistics providers using drums, ISO tanks, or bulk tanker transport. Downstream demand comes from industries including pharmaceuticals, paints and coatings, industrial chemicals, fuel blending, laboratory reagents, and specialty manufacturing sectors that require organic solvents or ether-based intermediates. In 2025, global Dibutyl Ether output was about 190,000 tons with 220,000 tons of capacity, average prices of USD 1,500-3,200 per ton, and gross margins around 23%.
