According to our (Global Info Research) latest study, the global DIC Vision Sensor market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

The DIC vision sensor is a sensor that uses digital image correlation (DIC) technology and is mainly used to accurately measure the displacement, strain and deformation of objects. By capturing a continuous sequence of images, this sensor can monitor and analyze the changes of the measured object in real time. It calculates detailed data on displacement and deformation by comparing the changes of the object in the image sequence. This sensor is very useful in many fields such as material research, structural engineering and biomedicine, and is particularly suitable for applications that require non-contact and full-field measurement.
