According to our (Global Info Research) latest study, the global Dicaprylyl Carbonate market size was valued at USD 74 million in 2023 and is forecast to a readjusted size of USD 82 million by 2030 with a CAGR of 1.5% during review period.

Dicaprylyl carbonate is a synthetic or natural, plant or animal-derived fat, chemically speaking a diester of caprylyl alcohol with carbonic acid. It is a silicone alternative or green solution is one thing, but secondly it also acts as a solvent, which helps necessary ingredients to disperse evenly without any apparent sedimentation. It also has an alkyl chain in its structure, which makes it favorable for fatty substances or secretions. As a result, it forms a film over the surface of the skin and doesn't allow moisture to pass through or escape. It moisturizes dry skin and it has good spreadability and velvety feel is its trademark, as mentioned in reliable resources. It is used in baby and face care, conditioning preparations, sun, after sun-, body and color preparations, self-tanning products to enlist some of the products.

Global key players of Dicaprylyl Carbonate include BASF, Taiwan NJC Corporation and Solvay, etc. Top three players occupy for a share about 16%.
