Abstracts

According to our (Global Info Research) latest study, the global Dicarboxylic Acid market size was valued at US\$ 11631 million in 2025 and is forecast to a readjusted size of US\$ 17690 million by 2032 with a CAGR of 6.2% during review period.

Dicarboxylic acids are organic compounds containing two carboxyl (COOH) functional groups in the same molecule, typically represented as HOOC-R-COOH , where R can be an aliphatic chain, aromatic ring, or functionalized backbone; they are key intermediates in polymer chemistry, coatings, lubricants, and pharmaceuticals due to their reactivity in forming polyesters, polyamides, and plasticizers. The supply chain starts upstream with petrochemical or bio-based feedstocks (e.g., n-butane, cyclohexane, benzene, or renewable sugars/oils), which are converted through oxidation, fermentation, or catalytic processes into key dicarboxylic acids such as adipic acid, terephthalic acid, succinic acid, and sebacic acid; midstream involves purification (crystallization, distillation), grading (industrial, polymer-grade, high-purity), and large-scale production by chemical manufacturers; downstream, these acids are supplied to polymer producers (e.g., nylon, PET, polyesters), coatings and resin formulators, plasticizer manufacturers, and specialty chemical sectors, and finally distributed through chemical distributors to end-use industries including automotive, textiles, packaging, construction, and electronics. In 2025, global Dicarboxylic Acid output was about 8 million tons with 10 million tons of capacity, average prices of USD 1,200-3,000 per ton, and gross margins around 23%.
