Abstracts

According to our (Global Info Research) latest study, the global Die Attach Paste market size was valued at USD 720.3 million in 2023 and is forecast to a readjusted size of USD 936.9 million by 2030 with a CAGR of 3.8% during review period.

Die-attach are the term reserved for processes where the face of a die is attached to a substrate by a single joint. Typical die-attach materials are PbSn, PbSnAg or PbInAg alloys. These alloys wet conventional substrates and die metallizations due to the formation of intermetallic compounds, which build an adhesion layer between substrate or die metallization and bulk solder. To achieve the best wetting and lowest void rate, the solder material should contain the lowest possible oxide content.

Overall economic performance will continue to be the best indicator of future demand for Die Attach Paste. Asia Pacific alone is projected to account for a large percentage of new Die Attach Paste demand anticipated through 2026; the region's growing middle class, improving living standards, and fast-developing infrastructure is driving significant industry growth.
