Die cast aluminum alloy refers to a type of aluminum alloy that is commonly used in the die casting process. Die casting is a manufacturing technique where molten metal is injected into a mold under high pressure to create complex-shaped parts with fine details and a smooth surface finish. Aluminum alloys are preferred for die casting due to their lightweight, good thermal and electrical conductivity, corrosion resistance, and overall versatility.

The automotive and aerospace industries were increasingly focused on reducing the weight of their components to improve fuel efficiency and overall performance. Die cast aluminum alloys, known for their lightweight properties and good mechanical characteristics, were being used to replace heavier materials in parts such as engine components, transmission housings, and structural elements in aircraft.
