Abstracts

The global Die Casting Machines market size is expected to reach \$ 5697 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Die casting is a manufacturing process for producing accurately dimensioned, sharply defined, smooth or textured-surface metal parts. It is accomplished by forcing molten metal under high pressure into reusable metal dies. The process is often described as the shortest distance between raw material and finished product. A die casting machine is a machine used for pressure casting. This report focus on Die Casting Machine market.

With the progress of science and technology and industrial production, especially with the development of industries such as automobiles, motorcycles, and household appliances, die-casting technology has achieved extremely rapid development. 2024 is the year for new car-making forces. With the strong cross-border entry of Internet companies such as Baidu and Xiaomi, the competition in the new energy vehicle industry has become increasingly fierce, while driving the growth in demand for die-casting equipment. At present, one-piece die-casting parts are mainly used in new energy vehicles to reduce body weight, reduce energy consumption, and increase driving range. The industry believes that by 2030, the market share of new energy vehicles will increase to 50%, and the application prospects of integrated molding of ultra-large die-casting units are very impressive.

This report studies the global Die Casting Machines production, demand, key manufacturers, and key regions.
