According to our (Global Info Research) latest study, the global Die Casting market size was valued at USD 69710 million in 2023 and is forecast to a readjusted size of USD 67860 million by 2030 with a CAGR of -0.4% during review period.

Casting is a process, in which the liquid metal is poured into a mold that contains a hollow cavity of the desired shape. It is then allowed to solidify and is removed from the mold. Casting materials are usually metals or cold setting materials like epoxy, plaster, or clay that cure when mixed with other components. Casting helps in making complex shapes that are otherwise difficult to make by using other processes. Die casting is a process that can manufacture geometrically complex shaped metal parts using reusable molds (known as dies).
