Abstracts

Casting is a process, in which the liquid metal is poured into a mold that contains a hollow cavity of the desired shape. It is then allowed to solidify and is removed from the mold. Casting materials are usually metals or cold setting materials like epoxy, plaster, or clay that cure when mixed with other components. Casting helps in making complex shapes that are otherwise difficult to make by using other processes. Die casting is a process that can manufacture geometrically complex shaped metal parts using reusable molds (known as dies).

Scope of the Report:

This report focuses on the Die Casting in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Automotive manufacturers are encouraged to use lightweight metals for producing parts of an automobile due to various government regulations related to vehicle emission standards. This market research report identifies that the increasing demand for lightweight vehicles to reduce CO2 emissions will be one of the primary growth drivers for the global die casting market till 2021.

The die casting market is majorly concentrated due to the presence of international players. Local players find it difficult to compete against transnational vendors in terms of services, quality, features, and functionalities. The introduction of products with innovative technologies and features will strengthen the competitive environment of the market. They are also adopting the trend for automation of the casting process. The growth in the automotive industry in APAC is driving the market for die casting. The lightweight automobile production is extensively carried out in APAC, especially in

China, Japan, and India. The automotive manufacturers in the region are benefited by the emergence of automation technology in casting because it has enhanced the productivity level significantly.

The worldwide market for Die Casting is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
