A die grinder is a handheld power tool used for grinding, sanding, honing, polishing, or machining materials like metal, plastic, or wood. It is either powered by electricity or pneumatically driven. These power tools are useful for welders, boilermakers, ironworkers, sheet metal workers such as HVAC technicians, and other fabricators.

Scope of the Report:

This report focuses on the Die Grinder in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The increasing application of die grinders in the metal fabrication industry and the automotive industry will result in this market's steady growth during the forecast period. In the metal fabrication industry, die grinders help in the removal of unwanted and unfinished parts. Fabricated metal products find usage in end-user industries such as construction and machinery. In the automotive industry, straight die grinders and right angle die grinders are widely utilized for the production of automobiles and electric vehicles.

The global die grinder market is intensely competitive due to the presence of numerous large players that account for a major part of the overall market share. In the developed countries, the level of competition is tougher due to the presence of many multinational vendors. However, in emerging countries such as China and India, the local players play a major role in fostering market growth. The local players have an advantage over global players in terms of pricing and supply chains.

Geographically, the APAC region is anticipated to account for the largest market share during the forecast period. The relocation of automobile manufacturers to low-cost labor

countries like Indonesia, Vietnam, and India to reduce market response time and transportation costs will aid in the growth of this market during the forecast period. The worldwide market for Die Grinder is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
