ICs manufactured in the global semiconductor industry are delicate, and thus vulnerable to contamination causing malfunction. To prevent from such malfunctions, silicon chips or ICs are protected using packaging materials.

According to our (Global Info Research) latest study, the global Die-level Packaging Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Wafer-level packaging and die-level packaging are the most predominant packaging types. Wafer-level packaging involves the packaging of individual ICs through the best-fit packaging processes conducted in wafer-level manufacturing during the semiconductor production process, while die-level packaging involves packaging of each die and not the wafer as a whole.
