Abstracts

Dielectric etcher is a semiconductor etching equipment used for etching dielectric materials. The process involves etching with the help of dry etch tools, such as inductively coupled plasma or transformer coupled plasma type chambers, operating at low pressures. Carbon monoxide is used in many dielectric etch processes.

Scope of the Report:

This report focuses on the Dielectric Etchers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Currently, electronic devices utilize semiconductors with circuit line widths ranging from 0-20 nm. However, it is anticipated that the coming years will witness the emergence of ultraminiature circuits with line widths ranging from 0-10 nm memristors and transistors and are deployed over a silicon fabrication chip. These chips are very small and can be integrated into various end-user products. The growing trend of miniaturizing the electronic devices in aerospace and medical sectors will subsequently drive the demand for neuromorphic chips, which will in turn, fuel the demand for dielectric etching for circuit miniaturization.

One of the latest trends that will gain traction in the global dielectric etchers market is the emergence of 3D ICs. With technological advancements, there will be a significant increase in the demand for faster and better-performing chips that do not consume high energy. This will drive the demand for 3D chip stacking. Owing to the demand rising demand for smart and miniaturized electronics, electronic product manufacturers will demand the need for 3D ICs, which will in turn, offer chip manufacturers new opportunities for growth. One of the major chip manufacturers Applied Materials has

already introduced a new dielectric etch system called Centura Avatar for creating 3D memory architecture.

Though the dielectric etchers market has the presence of a very few vendors, it is highly competitive due to the strong position of the existing market players. With technological advancements in the semiconductor industry and the focus of the vendors towards following strategic alliances, the market's competitive environment will intensify further. The market has high entry barriers which limits the entry of new players. To enhance their revenue shares, the market players are focusing on enhancing their businesses across the world by following M&A activities.

The worldwide market for Dielectric Etchers is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
