Abstracts

According to our (Global Info Research) latest study, the global Dielectric Medium market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An dielectric medium is a material whose internal electric charges do not flow freely, and therefore make it nearly impossible to conduct an electric current under the influence of an electric field. This contrasts with other materials, semiconductors and conductors, which conduct electric current more easily.

The market in Asia Pacific is estimated to be the largest dielectric medium market, from 2018 to 2025. China and India are heavily investing in T&D infrastructure to meet the growing demand for electricity. North America is the second most lucrative markets for dielectric mediums as replacement and refurbishment of the existing infrastructure is the major requirement in the local T&D scenario. Meanwhile, Europe is another major market for dielectric mediums, since the concept of smart grid technologies is gaining momentum particularly among the European Union (EU) countries. A renewed focus on renewable sources of energy is being developed in countries such as Germany and the UK. These upcoming power generation sources are expected to push the growth of new T&D lines, which in turn would increase the requirements for dielectric mediums.
