According to our (Global Info Research) latest study, the global Diesel Antiwear Agent market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Diesel anti-wear agent is an additive specifically used to improve the lubrication performance of diesel and reduce the wear of components in the engine fuel system. Modern diesel engines, especially high-pressure common rail systems, have higher requirements for the lubricity of fuel because the fuel is directly injected into the combustion chamber under high pressure. However, due to environmental regulations, the sulfur content in diesel has been greatly reduced, and sulfur can provide lubrication to a certain extent. Therefore, low-sulfur diesel often leads to increased wear of the fuel system, especially the injection pump and the injection nozzle.
