Abstracts

The diesel engine is an internal combustion engine in which air is compressed inside the cylinder to ignite the fuel. Two main types of diesel engines are available in the market. They are two-stroke and four-stroke engines. Diesel engines are capable of offering better operational performance, which makes them a preferred choice over petrol engines. The market is expected to witness high growth due to the rising demand for diesel engines from the automotive industries in APAC. The latest development observed in the market is the incorporation of exhaust after-treatment technologies. This technology aims to reduce emissions, and aid compliance with set standards and regulations.

According to our (Global Info Research) latest study, the global Diesel Engine market size was valued at USD 234000 million in 2022 and is forecast to a readjusted size of USD 294700 million by 2029 with a CAGR of 3.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The market has been witnessing a broad range of product enhancements and developments to comply with the international standard regulations of various regions such as Euro VI in Europe. One such development is the incorporation of exhaust after-treatment technology with the diesel engine. This technology enables low emissions from diesel engines and increases their efficiency and is likely to see increased market penetration in the coming years. Such product developments are expected to aid the market's growth over the next several years.
