## Abstracts

According to our (Global Info Research) latest study, the global Diesel Engine Overhaul Service market size was valued at US\$ 1760 million in 2025 and is forecast to a readjusted size of US\$ 2444 million by 2032 with a CAGR of 4.8% during review period.

Diesel engine overhaul service refers to the systematic disassembly, inspection, repair, and performance restoration of diesel engines that have reached a certain operating cycle or have experienced performance degradation or wear failure. Its core objective is to restore the engine to or near its factory performance in key technical indicators. This service typically includes complete engine disassembly, crankshaft and cylinder block inspection and repair, cylinder liner and piston assembly replacement, fuel injection system calibration, turbocharger system overhaul, and reassembly and bench testing. It is widely used in construction machinery, ships, generator sets, mining equipment, heavy trucks, and industrial power systems. Compared to complete engine replacement, overhaul services have significant advantages in terms of cost, delivery time, and asset utilization, thus becoming a key link in the lifecycle management of high-load, high-value equipment. Its service value is not only reflected in the replacement of parts but also in diagnostic capabilities, process standards, and quality control levels. With the continuous expansion of the global stock of diesel power equipment, the extension of equipment service life, and users' increasing emphasis on downtime costs and total lifecycle costs, diesel engine overhaul services are evolving from passive repair to planned maintenance and professional services, and market demand is expected to remain stable in the long term.
