Diesel engines offer better operational performance, which makes them a preferred choice over petrol engines.

Scope of the Report:

This report focuses on the Diesel Engines for Non-Automotive Applications in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Diesel as a fuel type dominates the overall generator market. Industrial generators have been depending on diesel as the most preferred fuel type owing to its low cost and easy availability. However, there is a growing trend toward the usage of natural gas and other alternative environment-friendly and non-diesel fuel sources. Despite this fact, diesel will continue to lead the fuel type segment for many years to come. The diesel engines available have modified combustion chambers that provide optimal combustion rates, better fuel economy, and lower emissions. Manufacturers are also coming up with several advancements and modifications in terms of fuel emission treatment methods and fuel composition.

The global diesel engine market for non-automotive applications is fragmented with the presence of many local and global vendors. The international players contend based on quality, efficiency, and after-sales service. The competitive landscape in the market is predicted to intensify due to the shift in the preference of the buyers towards energy-efficient engines. To sustain their strong positions, the major players in the market are

likely to direct their efforts in distinguishing their products and comply with the stringent regulations outlined in various regions.

The worldwide market for Diesel Engines for Non-Automotive Applications is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
