Abstracts

The global Diesel Fuel Improver (Cetan Number Improver) market size is expected to reach $ 480 million by 2032, rising at a market growth of 3.0% CAGR during the forecast period (2026-2032).

Diesel fuel improver (cetane number improver) is a functional fuel additive specifically designed to increase the cetane number of diesel fuel, improve fuel ignition performance, and enhance combustion quality. It is primarily used in refineries, refined oil blending companies, oil depots, and fuel additive formulation companies. The cetane number of diesel fuel is an important indicator of the ignition performance of compression-ignition engines. Generally, a higher cetane number results in a shorter ignition delay after the compression stroke, which helps improve cold start performance, reduce combustion noise, and enhance the stability of the combustion process. Cetane number improvers increase the cetane number of distillate fuels by improving the ignition characteristics of the fuel during the compression stroke. This helps refineries improve the ignition quality of their products without significantly altering their diesel blending schemes and increases the flexibility of utilizing low-cetane number base components.
