According to our (Global Info Research) latest study, the global Desalination System market size was valued at USD 12590 million in 2023 and is forecast to a readjusted size of USD 17640 million by 2030 with a CAGR of 4.9% during review period.

Desalination systems are used to extract the salt or removal of salt from the sea water and produce water that is more suitable to human consumption, irrigation, and various industrial uses.

The availability of fresh water for consumption is very low and is declining at a faster rate. With the rise in demand for fresh water, there is a need for an alternative source of fresh water. This problem can be solved by using desalination system, which turns the unusable sea water into fresh water, by removing the salt and various minerals from the sea water. Desalination system works by using either electrical, thermal, or chemical energy.
