Abstracts

Generators convert mechanical energy into electrical energy. The source of mechanical energy varies from an internal combustion engine or a hand crank to a compressed air and reciprocating steam engine.

According to our (Global Info Research) latest study, the global Diesel Generator market size was valued at USD 21180 million in 2022 and is forecast to a readjusted size of USD 32800 million by 2029 with a CAGR of 6.5% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Digital technology is widely being used in generators that perform as a backup power source for large-scale jobs. However, analog controls still find application in smaller generators. The transition from analog to digital control technology has provided end-users with better and reliable monitoring of the fuel and coolant levels. Apart from this, the digital control systems allow monitoring of battery life, engine oil, and temperature.
