Abstracts

Dietary fibers are long thread-like structures that are widely present in fruits, vegetables, and grains. They are also known as roughage or bulk and include all parts of plant foods that are not digested or absorbed by the body. Though indigestible, they prove to be extremely useful in maintaining bowel regularity and preventing constipation and other bowel abnormalities.

According to our (Global Info Research) latest study, the global Dietary Fiber market size was valued at USD 7161.8 million in 2022 and is forecast to a readjusted size of USD 11970 million by 2029 with a CAGR of 7.6% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Recent studies have shown that people with high intake of fibers are less prone to diseases such as obesity, stroke, and hypertension. Consequently, people across the globe have become more concerned and cautious about their health and fitness and are paying more attention to the nutritional content of the food they consume. This change in the populace’s preferences will result in the augmented demand for fiber-based food products, which in turn will result in the growth of the dietary fiber market during the forecast period.

This report is a detailed and comprehensive analysis for global Dietary Fiber market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is constantly changing, this report explores the competition, supply and demand trends, as well as key factors that contribute to its changing demands across many markets. Company profiles and product examples of selected competitors, along with market share estimates of some of the selected leaders for the year 2023, are provided.
