Dietary Fiber Supplement refers to a type of nutritional supplement made from natural dietary fiber-rich raw materials (such as fruits, vegetables, grains, or microbial polysaccharides) through processes like extraction, purification, and processing, available in forms including powder, tablets, capsules, and gummies. It is designed to supplement the insufficient dietary fiber intake in daily diets, and can regulate intestinal flora balance, promote gastrointestinal peristalsis, and help maintain healthy blood sugar and lipid levels, serving as a common health product for improving digestive health and preventing chronic diseases.

Demand for Dietary Fiber Supplement is primarily driven by the growing awareness of healthy diets among consumers, the high incidence of intestinal and metabolic problems caused by low-fiber diets in modern lifestyles, and the increasing demand for functional nutritional supplements in the aging population and fitness groups. Business opportunities lie in the development of diversified and easy-to-take product forms (such as instant powders and delicious gummies) to meet different consumer groups' needs, the R&D of compound fiber supplements with targeted functions (e.g., weight management or intestinal regulation), the use of natural and organic raw materials to cater to the clean-label trend, and the expansion of market channels through e-

commerce and health food stores to reach younger and middle-aged consumer groups.
