Abstracts

Dietary fibres, also known as roughage, are indigestible complex carbohydrates found in a variety of foods such as fruits, vegetables, nuts, lentils, and grains. Dietary fibres are classified into two types: soluble and non-soluble. Both types aid in the proper functioning of the digestive system. Soluble fibres promote satiety, aid in weight loss, and regulate the body's cholesterol and blood sugar levels. Insoluble fibres, on the other hand, absorb water to normalise bowel movements and ensure proper stomach and intestine function.
