## Abstracts

The global Diethylene Triamine Pentaacetic Acid market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Diethylene Triamine Pentaacetic Acid (DTPA) is a synthetic organic compound that belongs to the polyaminopolycarboxylic acid family. It is also known by its chemical formula  $C_{14}H_{23}N_3O_{10}$ . DTPA is a chelating agent, which means it has the ability to bind and sequester metal ions.

DTPA has several applications in various industries. Its primary use is in complexing or chelating metal ions, particularly those of transition metals like iron, copper, zinc, and calcium. DTPA forms stable complexes with these metal ions, preventing them from reacting or interfering with other substances.
