According to our (Global Info Research) latest study, the global Diethylethanolamine market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Diethylethanolamine (DEAE) is a chemical compound with the molecular formula $C_6H_{15}NO$. It is used as a precursor in the production of a variety of chemical commodities such as the local anesthetic procaine. It can be reacted with 4-aminobenzoic acid to make procaine. DEAE can be used as a precursor for DEAE-cellulose resin, which is commonly used in ion exchange chromatography. DEAE can also be conveniently obtained from renewable sources. It is chemically stable and able to absorb carbon dioxide (CO_2) from its surroundings. In solution, it can decrease the surface tension of water when the temperature is increased.
