Abstracts

According to our (Global Info Research) latest study, the global Differential Busbar Protection Relay market size was valued at US\$ 257 million in 2025 and is forecast to a readjusted size of US\$ 373 million by 2032 with a CAGR of 5.4% during review period.

The differential busbar protection relay is a high-sensitivity protection device based on the current differential principle, which compares the current differences between incoming and outgoing lines in real time to detect faults, enabling rapid and accurate isolation of faulty components and preventing cascading failures in the system. The market outlook remains stable, supported by growing demand from smart grid development and high-voltage transmission projects. Upstream suppliers mainly provide current transformers, chips, and control modules, including Infineon, STMicroelectronics, and ROHM Semiconductor. The midstream focuses on the assembly and system calibration of protection relays. The downstream primarily serves the industrial and energy sectors, with representative users such as Siemens Energy, State Grid Corporation of China, and Mitsubishi Electric Energy Systems. In 2025, production was 100,000 units and the average price was USD 2,500 per unit. The industry's capacity utilization rate in 2025 was about 70%, and the average gross margin was around 35%.

Differential Busbar Protection Relay demand will be shaped by grid expansion, substation automation, and the need for faster fault isolation in high-reliability power systems. In transmission substations, industrial plants, renewable energy stations, and large data centers, busbar faults can cause wide-area outages, so protection devices must provide high-speed tripping, accurate current differential judgment, CT saturation handling, and reliable communication with bay-level equipment. As power systems

become more digital and renewable penetration increases grid complexity, buyers will place more emphasis on selectivity, cybersecurity, IEC 61850 compatibility, self-diagnosis, and lifecycle reliability.
