Abstracts

The global Differential Crystal Oscillator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The differential crystal oscillator is a crystal oscillator whose output is a differential signal. It is a differential signal transmitted by two lines. It will output a set of signals with the same amplitude and opposite phase. The output differential signal uses two signals with completely opposite phases to remove common mode noise. The receiving end will the logic state is determined based on the voltage difference between the two signals.
