According to our (Global Info Research) latest study, the global Differential Pressure Transmitters market size was valued at USD 1850.1 million in 2023 and is forecast to a readjusted size of USD 2734.7 million by 2030 with a CAGR of 5.7% during review period.

Differential Pressure Transmitters measure the difference between two pressures, one connected to each side of the sensor. Differential pressure sensors are used to measure many properties, such as pressure drops across oil filters or air filters, fluid levels (by comparing the pressure above and below the liquid) or flow rates (by measuring the change in pressure across a restriction). Technically speaking, most pressure sensors are really differential pressure sensors; for example a gauge pressure sensor is merely a differential pressure sensor in which one side is open to the ambient atmosphere.
