According to our (Global Info Research) latest study, the global Differential Probe market size was valued at USD 52 million in 2023 and is forecast to a readjusted size of USD 70 million by 2030 with a CAGR of 4.3% during review period.

A differential probe is used to look at signals that are referenced to each other instead of earth ground and to look at small signals in the presence of large DC offsets or other common mode signals such as power line noise. A differential probe can be used to make single-ended measurements by using its negative input as a ground reference contact and there are several advantages to using a differential probe to make single ended measurement action. Differential probes are especially popular for measuring high-frequency signals or signals where neither are referenced to ground.

Global top 5 players of Differential Probe occupied for 38% of the market, including PinTech, Keysight, Tektronix, SIGLENT Technologies, RIGOL. Asia Pacific is the largest market of Differential Probe, holding a share over 43%. Then North America takes 31%. In terms of type, High Voltage Differential Probes share over 78% of the market, while Low Voltage Differential Probe shares 22%.
