Differential Scanning Calorimetry, or DSC, is a thermal analysis technique that looks at how a material's heat capacity (C_p) is changed by temperature. A sample of known mass is heated or cooled and the changes in its heat capacity are tracked as changes in the heat flow. The differential scanning calorimeter (DSC) is a fundamental tool in thermal analysis. It can be used in many industries, including pharmaceuticals, polymers, food, paper, printing, manufacturing, agriculture, semiconductors, and electronics.

Scope of the Report:

This report focuses on the Differential Scanning Calorimeter (DSC) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Differential scanning calorimeter has developed for half a century. Technologically, it's very mature. High temperature differential scanning calorimeter of Netzsch is outstanding; however, PerkinElmer is good at low temperature differential scanning calorimeter. The vast majority of differential scanning calorimeters on the market keep heat flux constant. Only PerkinElmer's DSC 8500/8000 keeps power supply constant. We can't deny it, they sale 52 Units to University, institute and contract lab in 2015. But the market share is less and less. Malvern's differential scanning calorimeter is specializes in life sciences and drug discovery for the study of the stability of proteins and other biological molecules. It holds 85% micro differential scanning calorimeter market share in 2015.

World consumption of differential scanning calorimeter was relatively stable, which

mainly used as polymers, food, metal and general chemical analysis. And 61% of total consumption occupied by enterprises. The world's top 500 enterprises hold differential scanning calorimeters which mostly are TA instruments'. Netzsch's brand awareness is very high in Asia. China's sales growth rate of differential scanning calorimeter declines in 2014. It can be primarily attributed to lower research-focused higher priced instrument sales to governmentally funded customers that experienced a tightening of government spending. Average price of Japanese production is lower than European and American. So it's rather competitive.

The worldwide market for Differential Scanning Calorimeter (DSC) is expected to grow at a CAGR of roughly -5.7% over the next five years, will reach 50 million US\$ in 2023, from 71 million US\$ in 2017, according to a new GIR (Global Info Research) study.
