Abstracts

Differential Scanning Calorimetry (DSC) is the most regularly used technique for thermal analysis. It works by measuring the enthalpy changes in various samples because of the changes in their physical and chemical properties as a function of temperature or time. It measures heat of the sample relative to a reference at the time of physical transformation such as phase transition. Digital Scanning Calorimetry is one of the widely accepted technique in analytical chemistry. With this technique, it becomes possible to detect fusion, crystallization events, glass transition temperatures and study about oxidation as well as other chemical reactions. With this technique, one can learn a lot more than just a polymer's heat capacity. Researchers and scientists are able to gather critical data before, during and after creation of different products for industries including the pharmaceutical industry, food science and more.

SCOPE OF THE REPORT:

A large number of industrial base and requirement for quality control in every industry are the driving factors for this technique. Applicability in almost every type of industry is also growing its market. Usage in advance material research, analytical services, multipurpose analysis in various industries increases its demand. Continuous advancement in the technology also runs the market. With the development of new complex formulations, characterizing them becomes very difficult, the development of more precise, sensitive and durable differential scanning calorimetry systems have helped in finding out the solutions and keep its market growing. Limiting factors include the dependence of operational efficiency on too many aspects for checking the results such as sensitivity for changes, lack of operator efficiency and others. High cost and maintenance also restricts the growth.

The global Differential Scanning Calorimetry (DSC) market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.
