## Abstracts

According to our (Global Info Research) latest study, the global Diffused Wafer market size was valued at US\$ 375 million in 2023 and is forecast to a readjusted size of USD 539 million by 2030 with a CAGR of 5.3% during review period.

Diffused Wafers are a type of silicon wafer that undergoes a diffusion process to introduce specific impurities or dopants into the silicon material. This process is crucial in the fabrication of semiconductor devices, as it allows for the creation of regions within the wafer with controlled electrical properties. These wafers are used extensively in the production of integrated circuits (ICs), diodes, transistors, and various other semiconductor components.
