## Abstracts

According to our (Global Info Research) latest study, the global Difluoropyrazole Acid market size was valued at US\$ 227 million in 2025 and is forecast to a readjusted size of US\$ 351 million by 2032 with a CAGR of 6.4% during review period.

In 2025, global Difluoropyrazole Acid production reached approximately 12.3k tons , with an average global market price of around US\$18k per ton.

Difluoropyrazole acid (3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxylic acid) is a fluorinated heterocyclic organic compound belonging to the pyrazole derivative family, with the molecular formula  $C_7H_5F_2N_2O_2$ . It exhibits high chemical stability and bioactivity, making it an important fine chemical intermediate widely used in the synthesis of agrochemicals (such as herbicides and fungicides) and pharmaceuticals. It plays a key role in modern fluorinated specialty chemical systems.

The upstream of the difluoropyrazole acid industry includes fluorinated chemicals (fluorination reagents and difluoromethyl intermediates), basic organic raw materials (methylation agents and pyrazole precursors), and solvents, with representative suppliers such as Solvay, Arkema, and Daikin Industries. The midstream consists of fine chemical and agrochemical intermediate manufacturers, mainly located in China and India, focusing on fluorinated heterocycle synthesis and purification. Downstream applications are primarily in agrochemicals and pharmaceuticals, with companies such as Syngenta, Bayer, and Pfizer, forming a value chain from fluorinated raw materials to intermediates and end-use products.
