According to our (Global Info Research) latest study, the global Digestible Medical Sensors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Digestible Medical Sensor helps the doctor/caregiver get patient data on mobile application. Digestible Medical sensor will be used for medical adherence and study vital signs. The system consists of a smartphone, a sensor patch & a pill. Pill are coated with digestible metals like copper and magnesium, inside body the sensor is activated by electrolytes of the body transmitting signal to the patch on the torso which sends the data through Bluetooth to the patient and then to caregiver. The sensor help in getting the information like patient forgot to take medicine, choosing not to take the prescribed medicine, combining interacting drugs or taking the incorrect dose that might be dangerous lead to staggered recovery or damage to the body. It also help in getting vital signs of body eliminating the endless physical checkups, apart from this it help doctors understand how patient is responding to the treatment.
