According to our (Global Info Research) latest study, the global Digestive Aids market size was valued at USD 1898.4 million in 2022 and is forecast to a readjusted size of USD 4207 million by 2029 with a CAGR of 12.0% during review period.

Digestive aids are products, substances, or techniques used to support and improve the process of digestion within the human body.

Digestive aids are medications used to improve the functioning of the gastrointestinal tract, facilitate the digestion of food and relieve symptoms of indigestion. These medications are widely used in clinical practice, especially in the treatment of gastrointestinal problems, stomach ulcers, heartburn, gastroesophageal reflux disease (GERD) and other digestive disorders. Antacid medications such as proton pump inhibitors (PPIs) and H2 receptor antagonists (H2RAs) remain the mainstay of treatment for GERD and gastric ulcers. Although they are very effective, long-term use can lead to a number of side effects and safety concerns, so researchers are seeking safer alternatives. Probiotics and prebiotics are believed to be beneficial for gut health, improving the balance of intestinal flora and positively affecting digestion and the immune system. These products have become part of the market for digestive aids and new research continues to support their effectiveness. A number of natural herbs and herbal remedies are widely used to treat indigestion and gastrointestinal problems. These include turmeric, peppermint, wormwood and aloe vera. Researchers are delving into the efficacy and safety of these botanical medicines. Overall, the field of digestive aid medications is evolving, with researchers and doctors striving to find safer and more effective treatments, as well as a growing emphasis on the importance of personalised treatment and a healthy diet. In the future, as medical science continues to advance, we can expect to see more innovative and improved digestive aids and treatments.
