Abstracts

Digestive enzymes are substances produced by a human body that aid in digestion of food. In cases of individuals, where there are insufficient enzymes, digestive enzyme supplements are consumed to assist digestion.

Scope of the Report:

This report focuses on the Digestive Enzyme Supplements in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The urban lifestyle has become hectic, which has led to a decrease in consumption of home-cooked meals due to time constraints. Digestive disorders have increased due to the poor eating habits of individuals such as skipping meals and eating too quickly. Additionally, factors such as pollution from cars, pesticides, and plastic residues in the environment have disrupted digestion and enzyme production. These factors are impacting digestion negatively and has created an urge among individuals to reduce the chances of developing health complications related to digestion by the consumption of digestive enzyme supplements.

Due to the presence of several vendors, this market appears to be highly fragmented. Vendors are constantly competing for the top position and are competing with the local manufacturers in other countries. This is inducing the vendors to focus on distributing their products in other countries. Additionally, leading companies are opting for M&A of small and medium-sized vendors to increase their revenue share in the market.

The worldwide market for Digestive Enzyme Supplements is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
