## Abstracts

According to our (Global Info Research) latest study, the global Digital Accelerometer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A digital accelerometer is a device that measures the acceleration of vibration or motion of a structure. The force caused by the vibration or change in motion (acceleration) causes the mass to 'squeeze' the piezoelectric material, which produces an electrical charge proportional to the force applied to it. Applications include servo- and dynamic inclinometers in industrial motion control units, inertial measurement units (IMUs) and inertial navigation systems (INS) for GNSS-assisted positioning, and the navigation of manned and unmanned ground vehicles and trains.
