Abstracts

The global Digital Accelerometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A digital accelerometer is a device that measures the acceleration of vibration or motion of a structure. The force caused by the vibration or change in motion (acceleration) causes the mass to 'squeeze' the piezoelectric material, which produces an electrical charge proportional to the force applied to it. Applications include servo- and dynamic inclinometers in industrial motion control units, inertial measurement units (IMUs) and inertial navigation systems (INS) for GNSS-assisted positioning, and the navigation of manned and unmanned ground vehicles and trains.

This report studies the global Digital Accelerometer production, demand, key manufacturers, and key regions.
