Digital Archiving and Restoration Services are integrated, standards-compliant professional services covering the full lifecycle management of analog and digital content assets, combining archival science, information technology, digital forensics, media engineering, and cultural heritage conservation expertise. The service system consists of two core, mutually supportive pillars:

Digital Archiving: The systematic, long-term, and compliant management of digital assets, including standardized collection, metadata tagging, secure storage, integrity verification, format migration, and access control. Its core goal is to ensure the authenticity, reliability, usability, and traceability of assets over decades or even centuries, while meeting regulatory, legal, and business retention requirements. It is fundamentally distinct from casual data backup, as it follows international archival standards (e.g., ISO 15489, OAIS Reference Model) and addresses long-term risks such as format obsolescence, data degradation, and loss of legal admissibility.

Digital Restoration: The technical and artistic process of repairing, enhancing, and reconstructing degraded, damaged, obsolete, or low-quality analog (e.g., film, tape, photos, paper documents) and digital content. It aims to restore the original integrity of assets, improve visual/audio quality, and reconstruct lost or damaged elements, while strictly preserving the authenticity and historical value of the original work.

As a whole, these services enable the preservation of cultural heritage, ensure legal and regulatory compliance for records retention, extend the lifecycle of high-value content assets, unlock the reuse value of archived materials, and provide secure, authorized access to assets for government agencies, cultural institutions, enterprises, media organizations, and individual collectors.
