Conventional farming methods are influenced by several factors, including weather, sunlight, temperature, and rainfall. Hence, it is difficult to guarantee a stable food supply through conventional farming. The yield in this model can be affected by natural disasters or the increasing shortage of cultivable land. Under these circumstances, vegetable factories that grow vegetables indoors without soil are becoming a global necessity. Vegetable factories control light, temperature, humidity, and nutrients with the help of computers and, occasionally, robots.

According to our (Global Info Research) latest study, the global Digital Ballast market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The prospects for growth in the global digital ballast market will be driven by the advent of digital ballasts with adjustable voltages and light dimming capabilities. The light output of these ballasts can be adjusted to 50%, 75%, or 100% depending on the growth stage of the plants. The low-light output can be used during the initial stages of plant growth, and the output can be increased as the plants grow. The ability of these devices to save energy, especially when compared to electrical ballasts, will result in its augmented adoption during the forecast period.
