Abstracts

A caliper is a small metrology instrument used to measure small distances between two points of an object with great precision. Digital calipers display the result on an LCD screen placed at the front end of the device. They have an accuracy of 0.001 inches and a resolution of 0.0005 inches. A typical digital caliper is made of stainless steel and contains a plastic casing for the LCD display. The power source for these devices is usually lithium-ion (Li-ion) batteries, which can power these devices for up to 450 days depending on usage.

Scope of the Report:

This report focuses on the Digital Caliper in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. The high accuracy of digital calipers, compared to vernier and dial calipers, is one of the primary drivers contributing to the growth of the market. The use of digital calipers eliminate the chances of human errors by allowing the user to record the displayed value, which in turn provides improved reliability of measurements. Therefore, the advantages of higher accuracy and faster measurement time have led to an increased adoption of digital calipers in several industries. Companies such as Hexagon AB and Mitutoyo holds the majority of the market share and dominate the global digital caliper market with their global presence and a wide range of products. However, the high cost of their product offerings has led to the emergence of several domestic players, especially in China. These domestic vendors offer inexpensive products with relatively less reliability, durability, and energy efficiency, thus increasing the competition in the market.

The worldwide market for Digital Caliper is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
