Abstracts

Digital Collection Transaction System mainly has three transaction modes: collection only (non-transferable, non-resale), transferable and resaleable. Some platforms rely on the alliance chain blockchain developed by themselves to release digital collections. The collection itself is strictly prohibited from being transferred or resold, and is only used for collection, and secondary market transactions are strictly prohibited. The transfer model means that users can transfer digital collections within a certain period of time. The underlying technology of this type of platform can be alliance chain, and some platforms choose public chain as the underlying technology, which is similar to the current NFT products in the international market. The consignment model is open, and the platform allows users to trade after purchase. Such collections will rise with the increase in the number of transactions, and there is a risk of speculation.
