According to our (Global Info Research) latest study, the global Digital Communication Equivalent-time Sampling (ETS) Oscilloscopes market size was valued at US\$ 325 million in 2024 and is forecast to a readjusted size of USD 510 million by 2031 with a CAGR of 6.6% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Digital Communication Equivalent-Time Sampling (ETS) Oscilloscopes are specialized oscilloscopes used to analyze high-frequency digital signals, particularly in communication systems where the signals are too fast to be directly sampled with conventional real-time sampling techniques. ETS oscilloscopes provide a way to analyze very high-speed digital signals by capturing and reconstructing repetitive signals over multiple cycles to achieve high temporal resolution, even when the oscilloscope's sampling rate is lower than the signal's frequency.
