Abstracts

According to our (Global Info Research) latest study, the global Digital Compass market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A digital compass is like its analog counterpart. Both compasses use the Earth's magnetic field to determine which way is North, and both help bikers, hikers, mapmakers and trail makers know which direction they are heading. The difference is that an analog compass can wobble because of movement and may encounter interference from strong magnetic sources, so inaccuracy is a problem. A digital compass is much more accurate and sturdy, because it will only use the North Pole as a guiding mechanism. Aside from serious hikers and trail makers, the military also uses these compasses for the best accuracy.

Asia Pacific is expected to emerge as a high growth market over the forecast period owing to increasing demand for smartphones. China and India are perceived to behold placid growth in future.
