Abstracts

Digital content industry is an important component of the digital economy. The so-called digital content industry is the use of digital high-tech tools and information technology to integrate the image, text, images, audio and other content into products and services. Digital content is stored on either digital or analog storage in specific formats. Forms of digital content include information that is digitally broadcast, streamed, or contained in computer files. Viewed narrowly, types of digital content include popular media types, while a broader approach considers any type of digital information (e. g. digitally updated weather forecasts, GPS maps, and so on) as digital content. Digital content has seen an increase as more households now have access to the Internet. Therefore, it is easier for people to receive their news and watch TV online, rather than from traditional platforms. Because of this increased access to the Internet, digital content is commonly published through individuals in the form of eBooks, blog posts, and even Facebook posts.

SCOPE OF THE REPORT:

This report studies the Digital Content market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Digital Content market by product type and applications/end industries.

Large gains in game app spend in Japan and South Korea, with 4.4x and 5.8x growth year-over-year, respectively, were a key driver of the growth in mobile apps. China are high-growth markets, due to increasing device adoption and skyrocketing game app spend. South Korea comes out on top in various measures when looking at its mobile and digital content market. South Korea leads for 4G penetration and is the first country to reach over 50% for LTE subscribers. In Japan, apps have disrupted the mobile-first

market. Always a strong mobile content country, the shift to smartphone and tablet apps is disrupting established players in the Japanese market.

The UK is the leading European country for total digital content spend and spend per capita. Like the US, UK consumers spend on a broad range of digital content, with the UK having a particularly strong online music market. Strong growth in game apps was not enough to overtake online music in 2014, but continued growth will see spend on game apps leapfrog online music in 2015.

US leads digital content spend, The US has the widest range of content spend and the highest devices per capita across the broadest range of devices. Spend on games apps grew the most between 2014 and 2015, but online games held the lead. Game apps' growth will likely challenge online movies in the coming years.

The global Digital Content market is valued at 129600 million USD in 2017 and is expected to reach 271300 million USD by the end of 2023, growing at a CAGR of 13.1% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Digital Content.

Europe also play important roles in global market, with market size of xx million USD in 2017 and will be xx million USD in 2023, with a CAGR of xx%.
