Abstracts

The global Digital COPD Management market size is expected to reach \$ 1017 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Digital COPD Management refers to a digital health service system that utilizes artificial intelligence (AI), big data, mobile health applications, wearable devices, telemedicine, and smart pulmonary function monitoring equipment to provide long-term, continuous, and personalized management for patients with Chronic Obstructive Pulmonary Disease (COPD). By collecting data such as pulmonary function metrics, blood oxygen saturation, respiratory rate, activity levels, symptom changes, medication adherence, and acute exacerbation events and integrating this with AI algorithms, the system enables disease risk prediction, symptom monitoring, rehabilitation guidance, medication management, and remote physician follow-ups. Digital COPD management helps patients improve treatment adherence, reduce the risk of acute exacerbations, enhance quality of life, and alleviate pressure on healthcare resources. Its primary applications include stable-phase COPD management, early warning of acute exacerbations, pulmonary rehabilitation training, home oxygen therapy management, and remote chronic disease management; it represents a key direction in the digital management of respiratory diseases.

Driven by the rising global prevalence of COPD, an aging population, increasing demand for chronic respiratory disease management, the growth of telemedicine, and the widespread adoption of smart medical devices, the industry is shifting from traditional hospital-based follow-up models toward home-based, continuous, and intelligent management. Recent opportunities are concentrated in areas such as AI-driven acute exacerbation prediction, home pulmonary function monitoring, smart

inhaled medication management, remote pulmonary rehabilitation, wearable blood oxygen monitoring, digital therapeutics, and hospital-based chronic disease management platforms. Core industry competitiveness lies in AI algorithms for respiratory diseases, capabilities in pulmonary function data analysis and multi-device data integration, patient behavior management, medical service coordination, and clinical validation. Current industry pain points include insufficient long-term patient adherence, difficulty in timely detection of symptom fluctuations, inconsistent quality of home monitoring data, a lack of device interoperability standards, limited management capacity in primary care, and the need to refine business models for digital health services. Solutions involve deploying smart spirometers, blood oxygen monitors, and mobile health apps; predicting exacerbation risks via AI models; and establishing long-term management systems that combine remote physician oversight, medication reminders, exercise-based rehabilitation, and health education. Overall, Digital COPD Management is evolving into a comprehensive chronic disease management model characterized by continuous monitoring, intelligent early warning, remote intervention, and pulmonary rehabilitation management.

This report studies the global Digital COPD Management demand, key companies, and key regions.

This report is a detailed and comprehensive analysis of the world market for Digital COPD Management, and provides market size (US\$ million) and Year-over-Year (YoY) growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Digital COPD Management that contribute to its increasing demand across many markets.

Highlights and key features of the study

Global Digital COPD Management total market, 2021-2032, (USD Million)

Global Digital COPD Management total market by region & country, CAGR, 2021-2032, (USD Million)

U.S. VS China: Digital COPD Management total market, key domestic companies, and share, (USD Million)

Global Digital COPD Management revenue by player, revenue and market share 2021-2026, (USD Million)

Global Digital COPD Management total market by Type, CAGR, 2021-2032, (USD Million)

Global Digital COPD Management total market by Application, CAGR, 2021-2032, (USD Million)

This report profiles major players in the global Digital COPD Management market based on the following parameters - company overview, revenue, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include ResMed Inc, Philips Respironics, Propeller Health, Teva Digital Health, AstraZeneca Digital Health, GSK Digital Health, Boehringer Ingelheim Digital Health, Huma Therapeutics, Biofourmis, Kaia Health, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the world Digital COPD Management market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US\$ Millions), by player, by regions, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
