Abstracts

The global Digital Direct Injection Printing Machine market size is expected to reach $ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Digital inkjet printing represents an innovative and ecological upgrading direction of printing and dyeing, which provides a broad space for the development of the industry. On-demand printing has become the future development trend, and inkjet printing technology is promoting the development of this trend. The e-commerce platform will also become a new driving force for the development of the industry. Digital inkjet printing equipment realizes automated control processes, especially transfer printing equipment. A skilled worker can operate multiple devices at the same time, which greatly saves the number of personnel and reduces labor costs. The processing cost of inkjet printing continues to decline, and the average cost of ink is also on a downward trend. In particular, the comprehensive cost of digital transfer printing machines is approaching the average cost of traditional printing, and the application benefits of digital inkjet printing are constantly emerging.

In the past few decades, European equipment manufacturers have dominated the textile digital printing market for a long time, leading the development of industry technology. Until 2017, Europe has been the region with the highest output of digital textile printing in the world. However, since 2018, the output in Asia has grown sharply, surpassing Europe in that year, and the number of digital printing equipment in Asia has exceeded half of the world. It is expected that the main increase in the future market will still come from Asia, among which China, as the leader in the digital inkjet printing market, has huge market potential.
