Digital dual-energy X-ray absorptiometry bone densitometry is a medical imaging device used to detect bone density. It uses low-energy and high-energy X-rays to penetrate human bones, collect signals with detectors, and use computers to process data to generate parameters such as bone mineral content (BMD). Its core advantages include short scanning time, high spatial resolution, clear images, and low radiation dose. It is used in clinical scenarios such as orthopedics, endocrinology, and geriatrics for early screening of osteoporosis, fracture risk assessment, and efficacy monitoring.
