Abstracts

According to our (Global Info Research) latest study, the global Digital Engineering Certification Services market size was valued at US\$ 1826 million in 2025 and is forecast to a readjusted size of US\$ 2710 million by 2032 with a CAGR of 5.8% during review period.

To address the common problems of a lack of unified standards and credibility verification for various digital engineering technologies, tools, data models, and deliverables during the digital transformation process, which leads to difficulties in cross-organizational collaboration, inconsistent quality, and ineffective data integration throughout the entire lifecycle, digital engineering certification services have emerged. With the widespread penetration and deep application of concepts and technologies such as Building Information Modeling (BIM), digital twins, and intelligent manufacturing in the global engineering field since the beginning of the 21st century, this service area has evolved from early single-software skill certification to a mature comprehensive evaluation system. Currently, digital engineering certification services have developed into an authoritative multi-dimensional evaluation framework covering individual professional capability certification, enterprise implementation capability rating, software product interoperability certification, and project deliverable compliance auditing. Widely applied in construction engineering, manufacturing, infrastructure, smart cities, and other fields, it can systematically improve the level of digital practices in the industry, ensure the quality and interoperability of project data, and thus lay a solid and credible digital foundation for the successful delivery and sustainable operation of engineering projects.
