The global Digital Fiber Optic Visual Fault Locators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A digital fiber optic visual fault locator (VFL) is a compact handheld instrument used for detecting and locating faults, bends, breaks, and other issues in optical fiber cables. It operates by sending a visible laser or LED light through the fiber, and when there is a fault, the light scatters or leaks, making the issue visible to the technician. These VFLs are essential tools for the maintenance, troubleshooting, and installation of fiber optic networks.
